## 1 Development Strategy

## 1.1 Spatial Areas

|                                | i) Ret | ain Core Strategy Approach (4 Spatial Areas)            | ii) Reduce Spatial Areas to 3 |   |  |  |
|--------------------------------|--------|---|-------------------------------|---|--|--|
| 9: To reduce emissions         | 0      | The option does not have a direct impact on             | 0                             | The option does not have a direct impact on climate     |  |  |
| contributing to climate        |        | climate change and reducing emissions as it             |                               | change and reducing emissions as it considers the       |  |  |
| change and ensure              |        | considers the different characters across West          |                               | different characters across West Berkshire and how      |  |  |
| adaptation measures are in     |        | Berkshire and how development should be split           |                               | development should be split across these areas. A       |  |  |
| place to respond to climate    |        | across these areas.                                     |                               | reduction in the number of spatial areas will not       |  |  |
| change                         |        |   |                               | impact on climate change                                |  |  |
| 1: To enable provision of      | ?      | The East Kennet Valley and Eastern Area are quite       | +                             | The reduction to 3 spatial areas allows more            |  |  |
| housing to meet identified     |        | constrained in terms of where additional                |                               | flexibility in relation to where development could be   |  |  |
| need in sustainable            |        | development may be able to go, so by continuing         |                               | focused, therefore, allowing the district's housing     |  |  |
| locations                      |        | with four spatial areas there could be an impact on     |                               | needs to be met.  |  |  |
|                                |        | the derivability of housing in these more               |                               |   |  |  |
|                                |        | constrained areas.                                      |                               |   |  |  |
| 2: To improve health, safety   | 0      | The option will not direct impact on health, safety,    | 0                             | The option will not directly impact on health, safety,  |  |  |
| and wellbeing and reduce       |        | wellbeing or inequities                                 |                               | wellbeing or inequality.                                |  |  |
| inequalities                   |        |   |                               |   |  |  |
| 3: To improve accessibility    | 0      | The option will not directly impact on accessibility to | 0                             | The option will not directly impact on accessibility to |  |  |
| to community infrastructure    |        | community infrastructure                                |                               | community infrastructure                                |  |  |
| 4: To promote and maximise     | 0      | The option will not directly impact on travel           | 0                             | This option will not directly impact on travel patterns |  |  |
| opportunities for all forms of |        |   |                               |   |  |  |
| safe and sustainable travel    |        |   |                               |   |  |  |
| 5: Ensure that the character   | +      | Each spatial area has its own distinct character,       | +                             | The spatial areas have their own distinct character,    |  |  |
| and distinctiveness of the     |        | which is protected by the spatial areas.                |                               | which is protected by the spatial area designation.     |  |  |
| natural, built and historic    |        |   |                               |   |  |  |
| environment is conserved       |        |   |                               |   |  |  |
| and enhanced                   |        |   |                               |   |  |  |
| 6: To protect and improve      | 0      | The option will not directly impact on air, water, soil | 0                             | The option will not directly impact on air, water, soil |  |  |
| air, water and soil quality,   |        | or noise.   |                               | or noise.   |  |  |
| and minimise noise levels      |        |   |                               |   |  |  |
| throughout West Berkshire      |        |   |                               |   |  |  |
| 7: To promote and improve      | +      | This option promotes the efficient use of land, but     | ++                            | This option separates the district into 3 areas, which  |  |  |
| the efficiency of land use     |        | there are limited opportunities for development         |                               | allows for greater consideration of suitable land,      |  |  |
|                                |        | within the East Kennet Valley and the Eastern Area      |                               | especially within the eastern area.                     |  |  |
|                                |        | which may limit efficient use of land.                  |                               |   |  |  |

| Nov | 20 | 22 |
|-----|----|----|
|-----|----|----|

| 8: To reduce consumption and waste of natural resources and manage thuse efficiently |  | 0               | The designation of spatial areas will not impact on natural resources.                                     |             |               | 0  | The designation of spatial areas will not impact on natural resources.        |                         |  |
|--|--|-----------------|--|-------------|---------------|----|---|-------------------------|--|
| 10: To support strong,   |  | +               | The option supports the economic base, however,  |             |               | ++ | This option allows for greater flexibility across the                         |                         |  |
| diverse and sustainable economic base which meets identified needs                   |  |                 | constraints within the East Kennet Valley and Eastern Area may limit the opportunities for further growth. |             |               |    | spatial areas, therefore, allowing maximum opportunities for economic growth. |                         |  |
| Summary of Effects   |  |                 |  |             |               |    |   |                         |  |
| Option i)  | Effec  | ct:             |  | Likelihood: | Scale:        |    | Duration:   | Timing:                 |  |
|  | Overa  | Overall Neutral |  | High        | District Wide |    | Permanent   | Long Term (Plan period) |  |
|  | Overall this option will have a neutral impact on sustainability. There are positive sustainability impacts identified in relation to economic and environmental sustainability. The impacts on social sustainability are likely to be neutral given the limitations for development options in the Eastern Area and East Kennet Valley.   |                 |  |             |               |    |   |                         |  |
| Option ii)   | Effec  | ct:             | •  | Likelihood: | Scale:        |    | Duration:   | Timing:                 |  |
|  | Overa  | all Pos         | itive  | High        | District Wide |    | Permanent   | Long Term (Plan period) |  |
|  | Overall this option is likely to have a positive impact on sustainability. There are significantly positive impacts identified in relation to economic sustainability, with positive impacts on social sustainability. While environmental sustainability is likely to be neutral with mitigation measures there could also be some positive environmental sustainability impacts. |                 |  |             |               |    |   |                         |  |

# 1.2 Spatial Strategy

|  | 1: Foo | cus on Newbury   | 2: Focus on Thatcham |   |  |  |  |
|--|--------|--|----------------------|---|--|--|--|
| 9: To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change | +      | The strategy proposes to direct development towards the most sustainable locations, therefore, there should be a positive impact on reducing climate emissions and ensuring adaption measures are in place to respond to climate change. However, development would not be strategic in nature and would result in a larger number of smaller sites being developed. | ++                   | The strategy directs development towards the most sustainable locations, and proposes strategic development in Thatcham which allows for a wider range of climate mitigation measures to be included within the development than may be possible over a larger number of smaller sites. |  |  |  |
| 1: To enable provision of housing to   | ?      | Newbury is the main town on the districts and therefore, has the highest number of services and facilities to support  | ++                   | Thatcham is considered to be a sustainable location within the district. Strategic development in the town would have a   |  |  |  |

| west Berksnire L  | ocai Pi | an Review SA/SEA Append  | IIX 4 | NOV 2U22  |
|---|---------|--|-------|---|
| meet identified need in   |         | additional growth. However, limited options for sites could lead to some uncertainty as to the impact on this objective  |       | significantly positive impact on this objective in terms of provision of housing to meet identified need.   |
| sustainable locations   |         |  |       |   |
| 2: To improve health, safety and wellbeing and reduce inequalities  | +       | Development should allow for positive effects on health, safety and wellbeing  | ++    | Additional development in Thatcham would allow for provision of new services and facilities to improve health, safety and wellbeing as well as helping to reduce inequalities |
| 3: To improve accessibility to community infrastructure   | +       | Newbury already has a wide range of services and facilities, a development focus in this area would seek to build on the network of facilities already in place.   | ++    | Strategic scale development in Thatcham would allow for the provision of new and improved services and facilities for the community.  |
| 4: To promote and maximise opportunities for all forms of safe and sustainable travel                                     | +       | Newbury is the biggest town in the district and already had a good range of sustainable travel options, development focus here would help to build on this.        | +     | Strategic level development in this area would allow for new and improved opportunities for safe and sustainable travel   |
| 5: Ensure that the character and distinctiveness of the natural, built and historic environment is conserved and enhanced | 0       | This is not specifically dealt with by this strategy.  Development would need to ensure that it conserves and enhances the natural, build and historic environment | 0     | This is not specifically dealt with by this strategy.  Development would need to ensure that it conserves and enhances the natural, build and historic environment            |
| 6: To protect and improve air, water and soil quality, and minimise noise levels throughout                               | 0       | This is not specifically dealt with by this strategy.  Development would need to ensure that it protects areas from/minimises pollution                            | 0     | This is not specifically dealt with by this strategy.  Development would need to ensure that it protects areas from/minimises pollution                                       |

#### 1.3 Settlement hierarchy

|  | 1) Re  | move Aldermaston from Service  | 2) Add | Streatley to Service Villages  | 3) Remove Burghfield Common from |   |  |
|--|--------|--|--------|--|----------------------------------|---|--|
|  | Villag | es   |        | -  | Rural Service Centres            |   |  |
| 9: To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change | +      | The removal of Aldermaston from Service Villages will divert development away from the village towards more sustainable locations, which should help to reduce emissions contributing to climate change. | 0      | Inclusion of Streatley as a<br>Service Village would be<br>unlikely to impact on climate<br>change   | 0                                | Unlikely to impact on climate change as people would still come to Burghfield Common to access the services and facilities there  |  |
| 1: To enable provision of housing to meet identified need in sustainable locations   | 0      | Removal of Aldermaston would not have any impact on meeting local housing needs.   | +      | The inclusion of Streatley Service Village would help to direct development towards the more sustainable locations in the district.  | 0                                | The presence of the DEPZ restricts additional development taking place within Burghfield Common. Therefore, removal of the village from the settlement hierarchy would not have any impact  |  |
| 2: To improve health, safety and wellbeing and reduce inequalities   | 0      | Removal of Aldermaston from the Settlement hierarchy will not have a direct impact on health, safety, wellbeing or inequality  | 0      | Inclusion of Streatley would be unlikely to have a direct impact on health, safety, wellbeing or inequality.   | -                                | Removal of Burghfield Common from the settlement hierarchy may result in decreased investment in the services and facilities already in the village which would result in a negative impact on health, safety and wellbeing.          |  |
| 3: To improve accessibility to community infrastructure  | 0      | Removal of Aldermaston will not have a direct impact on accessibility to community infrastructure  | +/?    | Inclusion of Streatley could have a positive impact on accessibility to community infrastructure, by directing development to locations where there are more community facilities. | -                                | Removal of Burghfield Common from the settlement hierarchy may result in decreased investment in the services and facilities already in the village which would result in a negative impact accessibility to community infrastructure |  |
| 4: To promote and maximise opportunities for all forms of safe and sustainable travel  | 0      | Removal of Aldermaston will not directly impact on safe or sustainable travel. It is partly due to lack of sustainable travel  | +      | Inclusion of Streatley will direct development to areas which have good access to safe and sustainable travel options.   | 0                                | Removal of Burghfield Common form the settlement hierarchy is unlikely to impact on sustainable travel  |  |

## 2.2 Strategic Site Allocation at Sandleford Park

West Berkshire Local Plan Review

| SA Objective   | Optio   | ns   |   |  |          |   |   |  |  |
|--|---|--|---|--|----------|---|---|--|--|
|  | 1) Allocation of Sandleford<br>Park as in Core Strategy (up<br>to 2000 dwellings) |  | 2) Allocation of Sandleford Park as 2 sites with a protected road link between them (in line with land ownership) |  | 3) Alloc | cate part of the site   | 4) Allocation of Sandleford Park for up to 1500 dwellings |  |  |
| 9: To reduce emissions contributing to climate change and ensure adaptation measures are in place to respond to climate change | +   | Development of the site would allow for climate change measures to be included across the site | +/?   | Development of the site would allow for climate change measures to be included across the site, but the scale of 2 individual sites may not provide as many benefits as a whole site approach. | +/?      | Development of part of<br>the site would allow for<br>climate change<br>measures to be<br>included, but the scale<br>may not provide as<br>many benefits as a<br>whole site approach. | +   | Development of the site would allow for climate change measures to be included across the site   |  |
| 1: To enable provision of housing to meet identified need in sustainable locations   | +   | Allocation of the site enables development of housing to meet the identified need.             | +   | Allocation of the site enables development of housing to meet the identified need.   | -        | Allocation of part of the site would not help to meet the identified housing need.  | +   | Allocation of the site enables development of housing to meet the identified need. Although this option would not deliver the number of affordable homes option 1 would deliver. |  |
| 2: To improve health, safety and wellbeing and reduce inequalities   | +   | Development should<br>allow for positive effects<br>on health, safety and<br>wellbeing         | +   | Development should<br>allow for positive<br>effects on health,<br>safety and wellbeing   | +        | Development should<br>allow for positive<br>effects on health, safety<br>and wellbeing  | +   | Development should<br>allow for positive<br>effects on health, safety<br>and wellbeing   |  |
| 3: To improve accessibility to community infrastructure  | +   | Development of the site will result in a number of community infrastructure improvements       | +/?   | Development of the site should result in community infrastructure improvements, but the separation of the site   | ?        | Development of part of<br>the site would result in<br>some community<br>benefits, but not to the<br>level required to make<br>the best use of the site                                | +   | Development of the site will result in a number of community infrastructure improvements.  |  |

Nov 2022

|---|--|---|-----|---|-----|--|----|---|
|   |  |   |     | could result in a disjointed approach which could result in some important facilities not being located in the most   |     | and local community facilities.  |    |   |
|   |  |   |     | appropriate locations   |     |  |    |   |
| 4: To promote and maximise opportunities for all forms of safe and sustainable travel                                     | +  | Retention of a cohesive site will allow for continuous and well-designed routes for sustainable travel across the site.                                   | ?   | Separating the site into 2 parcels could result in disjointed opportunities for sustainable travel through and between the sites.   | -   | Allocation of part of the site would not provide a sustainable travel link through the site, which could limit opportunities for sustainable travel.                             | +  | Retention of a cohesive site will allow for continuous and well-designed routes for sustainable travel across the site.   |
| 5: Ensure that the character and distinctiveness of the natural, built and historic environment is conserved and enhanced | +  | The site policy ensures that development on the site takes into account the character and distinctiveness of the natural, built and historic environment. | +/? | It is likely that similar policy requirements would be put in place, however a lack of cohesion between the two parts of the site could result in negative impacts without adequate mitigation. | 0/? | Allocation and development of part of the site would protect one area of the site from development, but could result in a high level of impacts from the area that is allocated. | ++ | A reduced number on<br>the site allows for better<br>protection of the natural<br>environment as well as<br>protection of the<br>character of the area,<br>the built and historic<br>environment. |
| 6: To protect and improve air, water and soil quality, and minimise noise levels throughout West Berkshire                | 0  | Development on the site is unlikely to impact on air, water or soil quality   | 0   | Development on the site is unlikely to impact on air, water or soil quality.  | 0   | Development on the site is unlikely to impact on air, water or soil quality.   | 0  | Development on the site is unlikely to impact on air, water or soil quality   |
| 7: To promote and improve the efficiency of land use  | +  | Allocation of a single cohesive site allows for best use of the land  | ?   | Development of the site as 2 separate areas could result in poor use  | ?   | Allocation of only part of the site could result in poor use of land in some areas.  | +  | Allocation of a single cohesive site allows for best use of the land  |
